

BOW ELECTRONIC SOLDERS

BOW RMA-760 Rosin Mildly Activated Solder Paste

Product Description

- Excellent print definition
- Long stencil life
- Wide process window
- Excellent wetting on most board finishes
- Low Voiding
- Compatible with enclosed printing heads
- IPC Flux Classification ROL0

Alloys

Manufactured with low-oxide, spherical and uniformly sized powder. Bow RMA-760 is available in the following alloys: Sn63/Pb37, Sn62/Pb36/Ag2, Sn60/Pb40, Sn43/Pb43/Bi14 and Sn42/Bi58 alloys.

Powder Distribution

Micron Size	Type	Pitch Requirements
75 – 45	Type 2	24 mil & above
45 – 25	Type 3	16 mil to 24 mil
38 – 20	Type 4	12 mil to 16 mil

Micron Size	Type	Pitch Requirements
25 – 15	Type 5	< 12 mil
15 - 5	Type 6	< 8 mil

Available Packaging

The following packaging options are available for stencil printing and dispensing applications: 250g and 500g jars; 250g and 700g cartridges; 750g ProFlow® cassettes, 35g and 100g syringes.

Stencil Life

- > 8 hrs. @ 30-45% RH & 22-25° C
- ≈ 4 hrs. @ 45-70% RH & 22-25° C

Viscosity

Printing applications: 750 to 1,100 Kcps +/- 10%

Dispensing applications: 500 Kcps +/- 10%

Tested according to IPC-TM-650

Tack Value

Typical tackiness 48g force

Printing

The print definition of Bow RMA-760 is ideal for fine pitch applications. The stencil life of this rosin mildly activated product virtually eliminates the waste of solder paste. Consult the powder distribution chart to determine your mesh size requirements.

Printer Operation

The following are general guidelines for stencil printer optimization with Bow RMA-760. Some adjustments may be necessary based on your process requirements.

- Print Speed: 25-100 mm/sec
- Squeegee Pressure: 0.2-0.7 kg/inch of blade
- Under Stencil Wipe: Once every 10-25 prints or as necessary.

Stencil Cleaning

Automated stencil cleaning systems for both stencil and misprinted boards. Manual cleaning using 99% isopropyl alcohol (IPA) is recommended.

Storage and Handling Procedures

Refrigerated storage at 42-47° F will prolong the solder paste shelf life to no longer than 6 months. Syringes & cartridges should be stored vertically with the dispensing tip down. Solder paste should be allowed to reach ambient temperature naturally, prior to use (about 6-8 hours). NEVER FREEZE SOLDER PASTE.

Recommended Profiles:

Profile-A was designed to serve as a starting position for process optimization using Bow RMA-760. A cool down rate of (-) 2-4 C°/second is ideal for the formation of a fine grain structure without risking damage to thermally sensitive components.

Profile-B utilizing a soak of up to two minutes at 155°C may help to minimize voiding in BGA assemblies. This will allow more time for solvent components of the solder paste to outgas prior to reflow.

J-STD-004 (IPC-TM-650) Test Results:

Bow RMA-760 Rosin Mildly Activated Solder Paste			
Test	Standard	Values	Results
Flux Designation	IPC-TM-650 2.3.35	N/A	ROLO
Copper Mirror	IPC-TM-650 2.3.32	N/A	Pass
Silver Chromate	IPC-TM-650 2.3.33	N/A	Pass
SIR Test	IPC-TM-650 2.6.3.3	2.00E + 10	Pass

Refer to the MSDS for additional safety information.
